

## **ESAIC Advanced Patient Safety Course London, UK**

**1 & 2 July 2024**

### **What is the APSC?**

The ESAIC Advanced Patient Safety Course is a live course to teach patient safety tools to use in acute settings. We offer modern teaching using interactive group work and innovative 360-degree videos of key scenarios, followed by debriefing, to bring examples of critical situations to life.

### **The APSC is accredited with 12 CME credits (ECMEC®s).**

Healthcare professionals attending 100% of the APSC and who pass the course assessment will hold the **ESAIC Advanced Anaesthesia and Intensive Care Patient Safety Certificate**. We propose that bearers of this certificate be regarded as patient safety champions within their own institutions.

*“Fantastic course, a must for every anaesthesiologist. Should be in the basic package of the training.”*

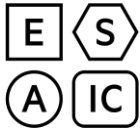

### **Target audience**

The APSC is aimed at all Health care professionals, patients and stakeholders interested in patient safety in acute settings: Intensive Care, Perioperative Care, Anaesthesia, Emergency and other settings where acute patients are treated.

A good level of English language ability is essential for this course.

### **Learn by experiencing**

The format of the live part of the APSC will be based on interactive lectures and unique 360° video simulated scenarios followed by an interactive debriefing.

*“Excellent course with high-quality education materials – the videos were interesting and well-made, and the manual is superb. Loved the discussion on the course with colleagues from other countries – there was a real sense of openness and honesty from all participants.”*

**Educational targets focus on the following goals:**

- Understand a fully integrated vision of the patient safety culture during intensive care and anaesthesia, applicable to all acute settings.
- Provide a framework to apply patient safety tools in different situations.
- Train the methodology to learn from errors, the importance of critical incident reporting, system analysis, corrective action implementation and feedback.
- Offer an experience of the importance and relevance of human factors and practice resources to improve resolving crisis situations in acute settings.
- Encourage attendees to advocate for patient safety in their work environments.
- Help attendees join patient safety-related networks.

*“I highly recommend taking on this course as it gives us a condensed perspective on patient safety as well as allows us to exchange experiences among different healthcare systems and countries.”*

**Advanced Patient Safety Anaesthesia and Intensive Care Certification.**

At the end of each APSC, attendees will need to complete and pass an online assessment to become certified. Health professionals attending 100% of the ASPC and who pass the course assessment will hold the **ESAIC Advanced Anaesthesia and Intensive Care Patient Safety Certificate**. This accreditation will need to be renewed every 5 years.

In line with the basic principles of the Helsinki Declaration on Patient Safety in Anaesthesiology, the ESAIC Patient Safety and Quality Committee will encourage every Anaesthesiology and Intensive Care Department in Europe to designate a PS leader with this minimum accreditation.

The APSC is a part of the **ESAIC Safer Care to Save Lives Ambassador's Programme** and can help ESAIC members who wish to apply to become a [Fellow of the European Society of Anaesthesiology and Intensive Care \(FESAIC™\)](#).

You can find out more about how to register for this event [here](#).
