- 16:00** **Depart**

This seminar covers the following domains of the General Medical Council's 'Good Medical Practice' framework:

Domain 2: Safety and quality

Domain 3: Communication, partnership and teamwork

Learning objectives

The knowledge of factors that influence the safe delivery of care continues to evolve, and the day will consider the national landscape and locally implemented projects that are contributing to the improvement. This day will look at the how the emerging theories have been transferred into practice and have been used to improve the safety of the care that we

deliver to our patients. The expert faculty will give practical examples of they have transferred the theory into practice and the barriers that they have faced and potential pitfalls to be avoided. We hope that the day will give the knowledge and inspiration for attendees to take back ideas and implement them in their own hospital

1. To understand the national context of patient safety
2. Understand the critical effect that our behaviour and fatigue has on team performance and individual functioning
3. To improve our understanding of emerging factors important to patient safety
4. To understand the role of the Healthcare Safety Investigation Branch in improving safety
5. Knowledge and understanding and of Safety 2 (how we get things right) and Learning from Excellence and how to start it
