Malignant Hyperthermia Crisis
AAGBI Safety Guideline

Successful management of malignant hyperthermia depends upon early diagnosis and treatment; onset can be within minutes of induction or may be insidious. The standard operating procedure below is intended to ease the burden of managing this rare but life threatening emergency.

1. Recognition
   - Unexplained increase in ETCO2 AND
   - Unexplained tachycardia AND
   - Unexplained increase in oxygen requirement
     (Previous uneventful anaesthesia does not rule out MH)
   - Temperature changes are a late sign

2. Immediate management
   - STOP all trigger agents
   - CALL FOR HELP. Allocate specific tasks (action plan in MH kit)
   - Install clean breathing system and HYPERVENTILATE with 100% O2 high flow
   - Maintain anaesthesia with intravenous agent
   - ABANDON/FINISH surgery as soon as possible
   - Muscle relaxation with non-depolarising neuromuscular blocking drug

3. Monitoring & treatment
   - Give dantrolene
   - Initiate active cooling avoiding vasoconstriction
   **TREAT:**
   - Hyperkalaemia: calcium chloride, glucose/insulin, NaHCO₃
   - Arrhythmias: magnesium/amiodarone/metoprolol AVOID calcium channel blockers - interaction with dantrolene
   - Metabolic acidosis: hyperventilate, NaHCO₃
   - Myoglobinemia: forced alkaline diuresis (mannitol/furosemide + NaHCO₃); may require renal replacement therapy later
   - DIC: FFP, cryoprecipitate, platelets
   - Check plasma CK as soon as able

   **DANTROLENE**
   2.5mg/kg immediate iv bolus. Repeat 1mg/kg boluses as required to max 10mg/kg
   **For a 70kg adult**
   - Initial bolus: 9 vials dantrolene 20mg (each vial mixed with 60ml sterile water)
   - Further boluses of 4 vials dantrolene 20mg repeated up to 7 times.

   **Continuous monitoring**
   - Core & peripheral temperature
   - ETCO₂
   - SpO₂
   - ECG
   - Invasive blood pressure
   - CVP

   **Repeated bloods**
   - ABG
   - U&Es (potassium)
   - FBC (haematocrit/platelets)
   - Coagulation

   - Continue monitoring on ICU, repeat dantrolene as necessary
   - Monitor for acute kidney injury and compartment syndrome
   - Repeat CK
   - Consider alternative diagnoses (sepsis, phaeochromocytoma, thyroid storm, myopathy)
   - Counsel patient & family members
   - Refer to MH unit (see contact details below)

4. Follow-up
   - Continue monitoring on ICU, repeat dantrolene as necessary
   - Monitor for acute kidney injury and compartment syndrome
   - Repeat CK
   - Consider alternative diagnoses (sepsis, phaeochromocytoma, thyroid storm, myopathy)
   - Counsel patient & family members
   - Refer to MH unit (see contact details below)

The UK MH Investigation Unit, Academic Unit of Anaesthesia, Clinical Sciences Building, Leeds Teaching Hospitals NHS Trust, Leeds LS9 7TF. Direct line: 0113 206 5270. Fax: 0113 206 4140. Emergency Hotline: 07947 609601 (usually available outside office hours). Alternatively, contact Prof P Hopkins, Dr E Watkins or Dr P Gupta through hospital switchboard: 0113 243 3144.
